Name: ID:

A segment of size **3584 bytes,** including **48 bytes** of header was fragmented for transmitting in a link with MTU=**X bytes**. The **9th** packet has its MF bit reset. The last fragment's data size is given as **(X- network layer header+2)**

- **I.** **Find out** the total number of fragmented packets. [2]
- II. **Calculate** the value of X. [7]
- **III.** **If the fragment offset of last segment and second last segment is M and N,**

Is the M/N= (X- network layer header) statement true?
Provide a detailed explanation. [6]
